We would like to see something like this happen in NC. It will be harder since MD has a policy mandate for EV adoption bc they are a ZEV MOU signatory, and the Commission and public staff are more amenable to the concept of utility investment in EV infrastructure. If it were easy, though, it would already be done.

Hi Diane,

Mike and I were very involved in the process in Maryland, and as I said in the article, the Commission led a very open, collaborative process that allowed all the stakeholders to get a sense of the market and how to address it.

I'm happy to talk through the details of this proposal on a call (all 212 pages), as it contains rate designs, rebates, utility facilitated sites, hitting multiple points in the market. Would be good to compare the MD regulatory environment and NC environment. We certainly would welcome seeing more processes like this – something we spoke to at the Joint Legislative Commission.

Dave
